WHO WE ARE

A Kota-built solar company with its hands on every roof it sells.

VR Enterprises — trading as **Mayukh Solar** — has been designing, supplying and installing solar power systems across Rajasthan since **2020**. We are a registered, **authorised vendor under the PM Surya Ghar: Muft Bijli Yojana**, which means a homeowner can go from first enquiry to a subsidised, net-metered, grid-connected system without ever dealing with a second agency.

What began with small residential rooftops has grown into a portfolio of more than a thousand installations and **5 MW of installed capacity** — spanning homes, factory tin sheds, and a fully commissioned **1.47 MW ground-mounted plant under PM KUSUM**.

We do not subcontract our installations. Survey, structure, wiring, DISCOM liaison and after-sales service are all handled by our own team out of Kota — which is why our customers can still reach the same people five years after commissioning.

Solar is a twenty-five year asset sold in a single afternoon. We would rather size it honestly, install it properly and still be here when the inverter needs attention.

OUR COMMITMENT

Systems engineered to generate for twenty-five years, not just to pass inspection on day one.

OUR FOCUS

Honest sizing, established components and paperwork handled end to end — subsidy, net metering and inspection included.

OUR GOAL

To make clean, self-generated power the default choice for every home and business in the Hadoti belt.

OUR PROMISE

One point of contact from the first site visit to the last service call.

WHAT SETS THE WORK APART

Sized Against The Bill

Twelve months of consumption reviewed before a single module is quoted.

Qualified At The Top

Founder-led by a B.Tech Electrical / M.Tech Solar engineer and licensed electrical contractor.

Paperwork Included

Portal registration, subsidy claim, net metering and inspection handled by us.

A WORD FROM OUR FOUNDER

Why we built this company, and how we intend to run it.

ASHISH RATHOR

FOUNDER & CHIEF EXECUTIVE
OFFICER

QUALIFICATIONS

B.Tech, Electrical Engineering
M.Tech, Solar Energy
Licensed Electrical Contractor

Founded VR Enterprises in 2020 and has led it from its first residential rooftop to a commissioned megawatt-scale plant.

"A SOLAR PLANT IS NOT A PRODUCT WE HAND OVER. IT IS A PROMISE WE HAVE TO KEEP FOR TWENTY-FIVE YEARS."

When we started in 2020, solar in this region was sold mostly on price. A customer would be promised a number, the crew would arrive, the panels would go up, and the company would be hard to reach by the following summer. We set out to build the opposite of that.

So we kept the team in-house, stayed close to home, and made a rule of sizing every system against the customer's actual electricity bill rather than against what we would like to sell. It is a slower way to grow. It is also why, a thousand installations later, our customers still call the same office.

Becoming an authorised PM Surya Ghar vendor and completing a 1.47 MW plant under PM KUSUM told us the approach holds at both ends of the scale — a three-kilowatt roof in Kota and a megawatt of ground mount deserve the same engineering discipline.

What I can promise anyone reading this is simple: an honest assessment before you commit, a system built properly, and a company that is still here when you need it.

Ashish Rathor

Founder & CEO, VR Enterprises · Mayukh Solar

Honest Sizing

Against the bill, not the sales target.

In-House Crew

The installers are our own people.

Local Service

A call away, five years on.

Built To Last

Engineered for a 25-year life.

WHAT WE DO

Three segments. One team. End-to-end responsibility.

RESIDENTIAL

ROOFTOP SOLAR UNDER PM SURYA GHAR

On-grid rooftop systems from 1 kW to 10 kW for homes and housing societies. We register the consumer on the National Portal and see the subsidy claim through to credit.

- ◆ Central subsidy up to ₹78,000 handled for you
- ◆ Net metering applied for and commissioned
- ◆ Bank loan documentation support

COMMERCIAL & INDUSTRIAL

TIN SHED & FACTORY ROOFTOPS

Purpose-built mounting for profiled tin sheds, RCC roofs and warehouse spans — the structures most EPCs get wrong. Four of our plants are above 50 kW.

- ◆ Non-penetrative & clamp-based shed mounting
- ◆ Accelerated depreciation guidance for businesses
- ◆ HT/LT coordination with the DISCOM

AGRICULTURAL & UTILITY

GROUND-MOUNT & PM KUSUM

Land-based plants for farmers, feeder-level developers and agri-businesses. Our **1.47 MW PM KUSUM project** is commissioned and exporting.

- ◆ Site survey, shadow analysis & array layout
- ◆ Civil foundations and mounting structures
- ◆ Evacuation, metering and commissioning

AFTER SALES

OPERATIONS & MAINTENANCE

The install is the beginning of the relationship, not the end. Our technicians are local, so a service call is a drive away.

- ◆ Annual maintenance contracts & module cleaning
- ◆ Inverter fault diagnosis and warranty claims
- ◆ Generation reviewed against design estimate

NOT SURE WHICH YOU NEED?

Send a photograph of your roof or shed and last month's electricity bill. We will tell you what will fit, what it will generate and what it will cost.

WHY VR ENTERPRISES

Five years, five megawatts, and a team you can put a name to.

- 
GOVERNMENT-REGISTERED
 Authorised PM Surya Ghar vendor with a completed PM KUSUM project on record — verifiable credentials, not claims.
- 
IN-HOUSE EXECUTION
 Our own engineer and technicians do the install. No labour contractors, no shifting blame when something needs fixing.
- 
ALL THREE MOUNTING TYPES
 Rooftop, tin shed and ground mount — we are not forcing your site into the one structure we happen to know how to build.
- 
PAPERWORK HANDLED
 Portal registration, subsidy claim, net-metering application and DISCOM inspection are our job, not yours.
- 
LOCAL, AND STAYING LOCAL
 One office, six districts, five years in. Our service radius is a drive, not a courier route.

ENGINEER

04

SITE
TECHNICIANS

07

OPERATIONS
& SUPPORT

Twelve people in total — small enough that your project is never a number, large enough to run several sites at once.

BRANDS WE BUILD WITH

Modules, inverters and balance-of-system sourced from established Indian manufacturers. The final make is confirmed per project against availability and site design.

OUR PROJECTS

Five megawatts, built one site at a time.

FLAGSHIP · COMMISSIONED

PM KUSUM GROUND-MOUNTED PLANT

A complete 1.47 MW ground-mounted solar plant executed under the PM KUSUM scheme — delivered end to end from land survey and array layout through civil works, mounting structures, evacuation and commissioning.

1.47 MW

INSTALLED CAPACITY

Ground

MOUNTING TYPE

Complete

SCOPE DELIVERED

1000+

RESIDENTIAL ROOFTOPS

Homes across six districts running on their own generation, most of them subsidised through PM Surya Ghar.

4+

PLANTS ABOVE 50 KW

Commercial and industrial installations on factory tin sheds and large RCC roofs, sized against load profile.

5 MW

CUMULATIVE CAPACITY

Total installed capacity across residential, commercial, industrial and agricultural projects since 2020.

INCLUDED ON EVERY PROJECT

Structural Design

Mounting engineered for the roof type and local wind load.

Earthing & Protection

Lightning arrestor, earthing pits and DC/AC protection as standard.

DISCOM Liaison

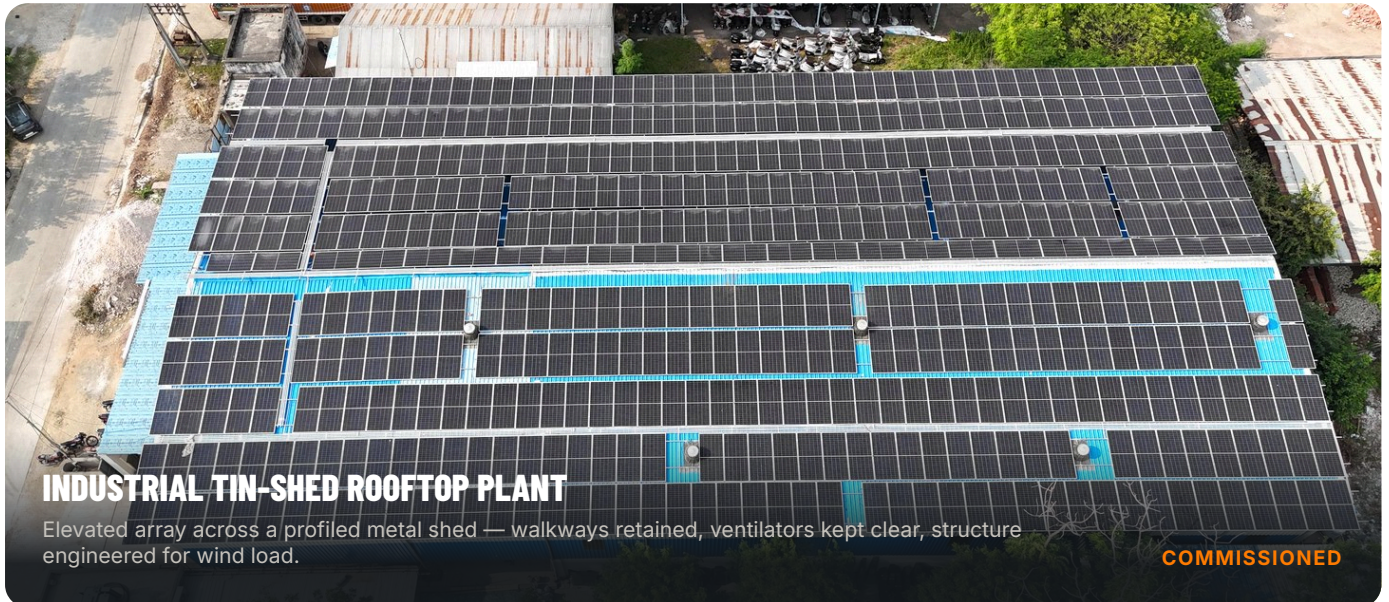

Feasibility, inspection and net-meter installation coordinated by us.

Handover File

Layout, warranties, test reports and service schedule in writing.

PLANTS **WE HAVE BUILT**

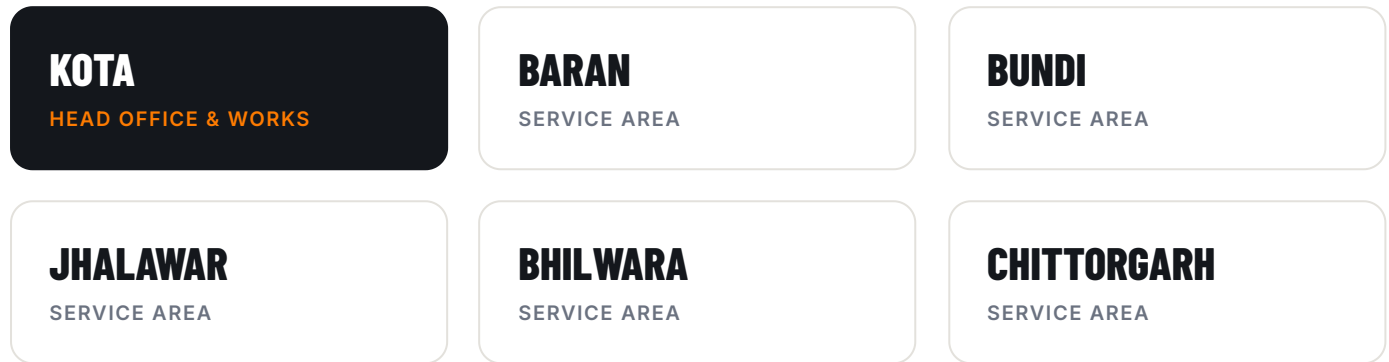

Commissioned sites, photographed as they stand today.

Site visits welcome. If you would like to see a working system before you decide, we will arrange a visit to a commissioned plant of comparable size in your district.

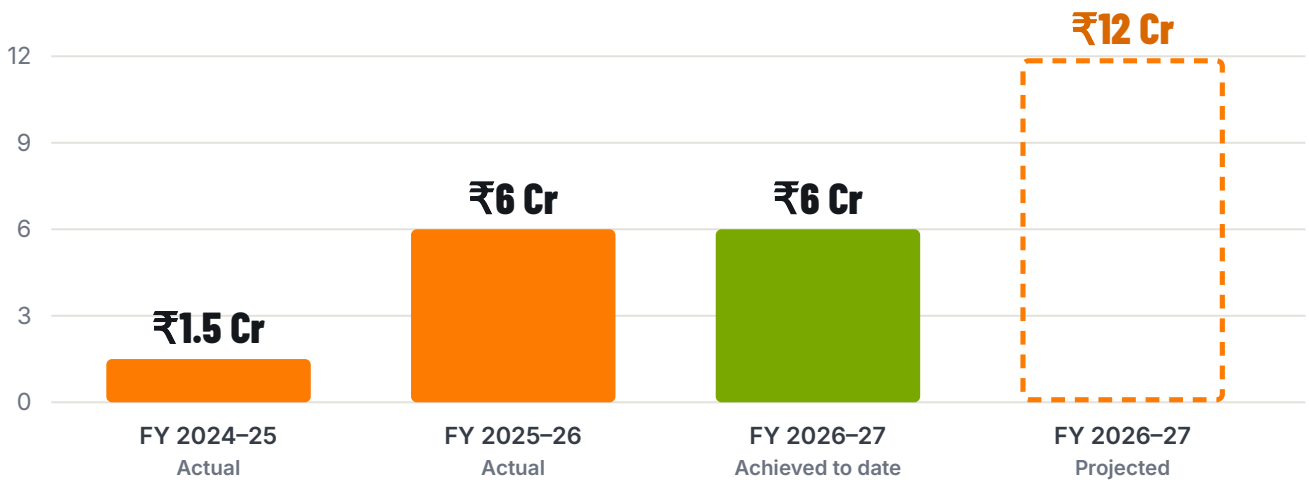

WHERE WE WORK

Six districts of Rajasthan, served out of one office in Kota.

BUSINESS GROWTH

Turnover by financial year, in crore rupees.

FY 2026-27 figures are year-to-date as at September 2026. The full-year figure is a projection based on work in hand, not a guarantee of performance.

MAKING IT AFFORDABLE

Central subsidy plus bank finance — often for less than the bill it replaces.

PM SURYA GHAR SUBSIDY

As an authorised vendor we register your application, install against the approved specification and pursue the claim until the subsidy is credited to your account.

SYSTEM SIZE	CENTRAL SUBSIDY
Up to 2 kW	₹30,000 per kW
Additional kW (2–3 kW)	₹18,000 per kW
3 kW and above	₹78,000 (capped)

Subsidy slabs as notified under the PM Surya Ghar: Muft Bijli Yojana. Eligibility, disbursal and rates are governed by the scheme and may be revised by the Government of India.

BANK FINANCE & EMI

Residential rooftop systems are eligible for concessional, collateral-free loans under the scheme. We prepare the quotation, technical annexure and documentation your bank asks for, and coordinate with the branch through to disbursal.

- ◆ Loan documentation and technical annexure prepared by us
- ◆ Coordination with your bank or NBFC through to disbursal
- ◆ EMI frequently offset by the savings on your electricity bill
- ◆ Accelerated depreciation guidance for commercial buyers

The practical effect: for a typical 3 kW home system, the central subsidy covers a substantial share of the cost and the balance can be financed — so the monthly outgo replaces a bill instead of adding to it.

HOW THE SUBSIDY REACHES YOU

01

Portal Registration

We register you on the National Portal against your consumer number.

02

Feasibility Approval

The DISCOM approves technical feasibility for your connection.

03

Installation

We install to the approved specification using listed components.

04

Net Metering

Meter installed and inspection report issued by the DISCOM.

05

Subsidy Credited

Claim filed with your bank details; subsidy credited to your account.

WHAT TO SEND US TO GET A QUOTE

Two things are enough to start: a recent electricity bill and a photograph of the roof or shed. Everything else is our job.

Your Bill
FOR HONEST SIZING

A Photo
OF THE ROOF OR SHED

FROM ENQUIRY TO EXPORT

Eight steps, one point of contact throughout.

01**Site Survey**

Roof or land assessed, shadow checked, twelve months of billing reviewed.

02**Design & Quote**

System sized to your consumption, with a written bill of materials.

03**Agreement**

Scope, timeline and payment terms confirmed in writing before work starts.

04**Registration**

Portal application, subsidy claim and net-metering paperwork filed.

05**Structure**

Civil work and mounting structure built for the roof type or terrain.

06**Installation**

Modules, inverter, earthing and cabling installed by our own technicians.

07**Commissioning**

DISCOM inspection, net meter installed, system energised and tested.

08**Handover & AMC**

Documentation handed over, warranties registered, service schedule set.

LET'S TALK SOLAR.

Send us your last electricity bill and we will come back with an honest system size, a generation estimate and the subsidy you qualify for — no obligation.
